

# Communication Protocol of PV Grid-Connected String Inverters

V1.1.2

Version number	Date	Note
V1.1.0	2016-4-11	initial version. Unofficial version(V1.0.13) is no longer used.
V1.1.1	2016-5-13	modify the register address and some related content: 5039--Power limitation adjustment 5040--Reactive power adjustment
V1.1.2	2017-5-13	Increase Inverter model : SG36KTL-M、 SG40KTL-M、SG10KTL-M、SG12KTL-M、SG80KTL、 SG80KTL-M、SG80HV、SG125HV

**Valid for device types:**

SG33KTL-M

SG40KTL-M

SG49K5J

SG50KTL-M

SG60KU, SG60KU-M, SG60KTL, SG60KTL-M, SG36KTL-M

SG8KTL-M、SG10KTL-M、SG12KTL-M、SG80KTL、SG80KTL-M、SG80HV、SG125HV

## 1. Introduction

This communication protocol, adopting Modbus RTU protocol, applies to the communication between Sungrow PV grid-connected string inverters and the upper computer (PC) monitoring software. This protocol can read the real-time operating data and fault states of inverters.

## 2. Communication Interface

### 1) RS485

	Default setting
Address	Inverter: 1 – 247 settable PC: 1 – 247 settable
Broadcast	Yes
Baud rate	9600bit/s
Check bit	Null or settable
Data bit	8
Stop bit	1
Mode	RTU
Appliance interface	RS485-2W cable connection

### 2) Ethernet (optional)

Default:

- IP: 192.168.1.100;
- Sub-Net: 255.255.0.0
- Port: 502

## 3. Definition of Address

- Read-only register type supports the cmdcode of 0x04
- Holding register type supports the cmdcode of 0x03, 0x10 and 0x06
- Cmdcodes 0x10 and 0x06 support the broadcast address 0

Note:

Communication address = protocol address - 1. If data of address 5000 is to be inquired, the corresponding sending address data is 4999 (0x1387);

U16: 16-bit unsigned integer, big-endian;

U32: 32-bit unsigned integer; little-endian for double-word data. Big-endian for byte data;

S16: 16-bit signed integer, big-endian;

S32: 32-bit signed integer; little-endian for double-word data. Big-endian for byte data

Power factor: + means leading; - means lagging, 1000 means power factor 1.000, 950 means power factor 0.95.

### 3.1 Running information variable address definition (read-only register)

No.	Name	Address	Data type	Data range	Unit	Note
Device attributes						
	Protocol No.	4950 - 4951	U32			
	Protocol ver.	4952 - 4953	U32			

	ARM software version	4954~4968	U16*15			Data type :UTF-8 Valid for inverters: SG8KTL-M SG10KTL-M SG12KU-M SG80KTL-M SG80HV SG125HV
	DSP software version	4969~4983	U16*15			Data type :UTF-8 Valid for inverters: SG8KTL-M SG10KTL-M SG12KU-M SG80KTL-M SG80HV SG125HV
	Reserved	4984 - 4989	U16*6			
	SN	4990 - 4999	U16*10			Data type :UTF-8

### Appendix 1 Device Work State 1

Device state (register 5038)	
State	Value read by register 5038
Run	0x0
Stop	0x8000
Key stop	0x1300
Emergency Stop	0x1500
Standby	0x1400
Initial standby	0x1200
Starting	0x1600
Alarm run	0x9100
Derating run	0x8100
Dispatch run	0x8200
Fault run	0x5500
Communicate fault	0x2500

### Appendix 2 Device Work State2

Work State (5081 – 5082)		Note
State	Corresponding BIT in address	

5081-5082		
Run	0	Total run state bit BIT17
Stop	1	1
Key stop	3	3
Emergency Stop	5	5
Standby	4	4
Initial standby	2	2
Starting	6	6
Alarm run	10	Total run state bit BIT17
Derating run	11	Total run state bit BIT17
Dispatch run	12	Total run state bit BIT17
Fault run	9	Total fault state bit BIT18
Communicate fault	13	Total fault state bit BIT18
Total run bit (device is grid-connected running)	17	
Total fault bit (device is in fault stop state)	18	

### Appendix 3 Device Fault Code

LCD display (decimal)	Communication send data (hexadecimal)	Description	Note
002	0x0002	Grid overvoltage	<p>Fault is occurred because the grid voltage exceeds the permissible range. Inverter can operate normally when the grid recovers.</p> <p>1. Check the grid voltage; If the grid voltage exceeds the permissible range, ask utility grid company for solution.</p> <p>2. Check if the protection parameter setting of the LCD meets requirements.</p> <p>3. If the fault still exists, please contact Sungrow.</p>
003	0x0003	Grid overvoltage	<p>This is a short-term fault because the grid transient voltage exceeds the permissible range. Inverter can operate normally when the grid recovers. Please refer to troubleshooting of fault 002 if this fault repeats.</p>

004	0x0004	Grid undervoltage	Fault is occurred because the grid voltage is lower than the permissible range. Inverter can operate normally when the grid recovers. 1. Check the grid voltage; If the grid voltage is lower than the permissible range, ask utility grid company for solution. 2. Check if the protection parameter setting of the LCD meets requirements. 3. If the grid voltage is normal, check if the AC cables are secure. 4. If the fault still exists, please contact Sungrow.
005	0x0005	Grid undervoltage	This fault occurs because the grid voltage is lower than the set overvoltage protection value II. Inverter can operate normally when the grid recovers. Please refer to troubleshooting of fault 004 if this fault repeats.
006	0x0006	Hardware fault	Please contact Sungrow.
008	0x0008	Grid over-frequency	Check the grid frequency. If the grid voltage exceeds the inverter permissible range, ask utility grid company for solution.
009	0x0009	Grid under-frequency	Check the grid frequency. If the grid voltage exceeds the inverter permissible range, ask utility grid company for solution.
010	0x000A	Islanding	Inverter can operate normally when the grid recovers. If this fault occurs repeatedly: 1. Check if the grid power supply is normal; 2. Check if AC cables are all firmly connected. 3. Check if AC cables are connected to the correct terminals (no reverse connection). 4. If the fault still exists, please contact Sungrow.
011	0x000B	The DC current exceeds limit	Wait for inverter recovery. If the fault still occurs, contact Sungrow.
012	0x000C	Leakage current exceeds limit	1. Check if the PV cells are in poor environment conditions, i.e. bad rainy or damp weather. 2. Check the PV strings for poor contact. 3. If the fault occurs repeatedly, contact Sungrow.
013	0x000D	Grid abnormal	Wait for inverter recovery. If the grid voltage exceeds the inverter permissible range, ask utility grid company for solution.
014	0x000E	Grid overvoltage	① Wait for inverter recovery.

			<p>②Check the grid voltage.          ③ If the fault still exists, please contact Sungrow.</p>
015	0x000F	Grid overvoltage	<p>Fault is occurred because the grid voltage exceeds the permissible range. Inverter can operate normally when the grid recovers.</p> <ol style="list-style-type: none"> <li>1. Check the grid voltage; If the grid voltage exceeds the permissible range, ask utility grid company for solution.</li> <li>2. Check if the protection parameter setting of the LCD meets requirements.</li> <li>3. If the fault still exists, please contact Sungrow.</li> </ol>
016	0x0010	PV power module overload	Contact SUNGROW.
017	0x0011	Grid unbalance voltage	<p>Wait for inverter recovery.</p> <ol style="list-style-type: none"> <li>1. If the grid voltage unbalance exceeds the inverter permissible range, ask utility grid company for solution.</li> <li>2. Change the unbalance degree from the LCD.</li> <li>3. If the fault still exists, please contact Sungrow.</li> </ol>
019	0x0013	Bus voltage is high	<p>Wait for inverter recovery.</p> <ol style="list-style-type: none"> <li>1. Check the LCD display to make sure if the PV voltage is normal. If the PV voltage exceeds the max. voltage, the PV cells configuration is too high. Please optimize the PV cell configuration.</li> <li>2. If the fault still exists, please contact Sungrow.</li> </ol>
020	0x0014	Bus voltage is high	Ditto
021	0x0015	Overcurrent protection	Contact SUNGROW.
022	0x0016	Overcurrent protection	Contact SUNGROW.
023	0x0017	PV input setting changes during inverter operation	<p>Check the PV input settings;          Restart the inverter.</p>
024	0x0018	Bus voltage unbalance	<p>Wait for inverter recovery.          If the fault still exists, please contact Sungrow.</p>
025	0x0019	Bus voltage unbalance	Ditto
026	0x001A	Bus voltage unbalance	<p>Bus voltage fluctuation. Please contact SUNGROW</p>
036	0x0024	Power module over-temperature	<p>Wait for inverter recovery. If this fault reoccurs,</p> <ol style="list-style-type: none"> <li>1. Check the LCD to make sure if the ambient temperature is too high;</li> <li>2. Check if the device is placed in</li> </ol>

			well-ventilated place; 3. Check if the device is in direct sunlight. If so, please shield it. 4. Check if the fans are normal. Replace the fan if otherwise. 5. If the fault still exists, please contact Sungrow.
037	0x0025	Ambient over-temperature	Ditto
038	0x0026	Relay fault	Contact Sungrow.
039	0x0027	System low insulation resistance	Wait for inverter recovery.If this fault occurs repeatedly and device cannot operate normally, 1. Check if the ISO protection value is set too high from the LCD. 2. Check if the low insulation situation occurs in rainy days or damp weather. Measure if the positive and PV cell negative polarities to the ground is too low. 3. If the fault still exists, please contact Sungrow.
040	0x0028	Overcurrent protection	Wait for inverter recovery.If the fault occurs repeatedly, please contact Sungrow.
041	0x0029	Hardware fault	Wait for inverter recovery.If the fault occurs repeatedly, please contact Sungrow.
042	0x002A	Hardware fault	Wait for inverter recovery.If the fault occurs repeatedly, please contact Sungrow.
043	0x002B	Temperature low	Stop and disconnect the inverter. Restart the inverter when temperature increases to the allowable range. If the fault still exists, please contact Sungrow.
044	0x002C	Ac & DC inversion circuit fault	Wait for inverter recovery.If the fault occurs repeatedly, please contact Sungrow.
047	0x002F	PV input setting does not match the actual connection	Stop and disconnect the inverter. Reset the PV array input.
048	0x0030	Hardware fault	Wait for inverter recovery.If the fault occurs repeatedly, please contact Sungrow.
049	0x0031	Hardware fault	Ditto
050	0x0032	Hardware fault	Ditto
051	0x0033	Hardware overvoltage/overcurrent protection	Ditto
070	0x0046	Fan fault	Check the inverter fans. Stop and disconnect the inverter to remove foreign objects. Replace the fan if it is broken.

071	0x0047	AC SPD alarm	Check if the SPD is loose or broken. Replace the SPD if necessary.
072	0x0048	DC SPD alarm	Ditto
074	0x004A	Communication fault	Check the communication cable between the LCD display and the DSP
075	0x004B	Insufficient sunlight	Wait for sufficient sunlight; If this fault occurs repeatedly in sufficient sunlight, check and change the PV input setting.
076	0x004C	PV overload	Wait for inverter recovery. 1. Check if the PV cell setting are reasonable; 2If the fault occurs repeatedly, please contact Sungrow.
078	0x004E	PV1 abnormal alarm	Caused because the PV1 is not connected. Ignore this alarm if PV1 is not connected at beginning. If PV1 is connected, 1. Check if the PV1 cables are loose. 2. Check if the PV1 DC fuse is broken. 3. If the fault occurs repeatedly, please contact Sungrow.
079	0x004F	PV2 abnormal alarm	Caused because the PV2 is not connected. Ignore this alarm if PV2 is not connected at beginning. If PV2 is connected, 1. Check if the PV2 cables are loose. 2. Check if the PV2 DC fuse is broken. 3. If the fault occurs repeatedly, please contact Sungrow.
080	0x0050	PV3 abnormal alarm	Caused because the PV3 is not connected. Ignore this alarm if PV3 is not connected at beginning. If PV3 is connected, 1. Check if the PV3 cables are loose. 2. Check if the PV3 DC fuse is broken. 3. If the fault occurs repeatedly, please contact Sungrow.
081	0x0051	PV4 abnormal alarm	Caused because the PV4 is not connected. Ignore this alarm if PV4 is not connected at beginning. If PV4 is connected, 1. Check if the PV4 cables are loose. 2. Check if the PV4 DC fuse is broken. 3. If the fault occurs repeatedly, please contact Sungrow.
087	0x0057	AFDpower module abnormal alarm	Contact SUNGROW.
088	0x0058	Arc fault	1. Check the PV cell cable connection and fuse for arc. 2. If the fault occurs repeatedly, please contact

			Sungrow.
089	0x0059	AFD stop alarm	Restart the AFD function through the LCD operation.
532	0x0214	String 1 reverse connection alarm	1. Check the completeness of the string settings. 2. Check the polarity of the PV input side. Reconnect the input if the polarities are reversed.
533	0x0215	String 2 reverse connection alarm	Ditto
534	0x0216	String 3 reverse connection alarm	Ditto
535	0x0217	String 4 reverse connection alarm	Ditto
536	0x0218	String 5 reverse connection alarm	Ditto
537	0x0219	String 6 reverse connection alarm	Ditto
538	0x021A	String 7 reverse connection alarm	Ditto
539	0x021B	String 8 reverse connection alarm	Ditto
540	0x021C	String 9 reverse connection alarm	Ditto
541	0x021D	String 10 reverse connection alarm	Ditto
542	0x021E	String 11 reverse connection alarm	Ditto
543	0x021F	String 12 reverse connection alarm	Ditto
544	0x0220	String 13 reverse connection alarm	Ditto
545	0x0221	String 14 reverse connection alarm	Ditto
546	0x0222	String 15 reverse connection alarm	Ditto
547	0x0223	String 16 reverse connection alarm	Ditto
548	0x0224	String 1 power module abnormal alarm	Caused by short-circuit, open circuit or low current of one input. Check if the voltage or current is abnormal through the LCD. 1. Check if the strings are broken. 2. Check if the PV cell cables are loose. 3. Check if the DC fuse is broken. 4. If the fault still exists, please contact Sungrow.

549	0x0225	String 2power module abnormal alarm	Ditto
550	0x0226	String 3power module abnormal alarm	Ditto
551	0x0227	String 4power module abnormal alarm	Ditto
552	0x0228	String 5power module abnormal alarm	Ditto
553	0x0229	String 6power module abnormal alarm	Ditto
554	0x022A	String 7power module abnormal alarm	Ditto
555	0x022B	String 8power module abnormal alarm	Ditto
556	0x022C	String 9power module abnormal alarm	Ditto
557	0x022D	String 10power module abnormal alarm	Ditto
558	0x022E	String 11power module abnormal alarm	Ditto
559	0x022F	String 12power module abnormal alarm	Ditto
560	0x0230	String 13power module abnormal alarm	Ditto
561	0x0231	String 14power module abnormal alarm	Ditto
562	0x0232	String 15power module abnormal alarm	Ditto
563	0x0233	String 16power module abnormal alarm	Ditto

#### Appendix 4 Country Information

Code	Country	Country (English)	Note
0	GB	Great Britain	

1	DE	Germany	
2	FR	France	
3	IT	Italy	
4	ES	Spain	
5	AT	Austria	
6	AU	Australia	
7	CZ	Czech	
8	BE	Belgium	
9	DK	Denmark	
10	GR_L	Greece Land	
11	GR_IS	Greece Island	
12	NL	Netherlands	
13	PT	Portugal	
14	CHN	China	
15	SE	Sweden	
16	Other 50Hz		
17	RO	Romania	
18	TH	Thailand	
19	TK	Turkey	
20	AU-WEST	Australia (west)	
21	Reserved		
25	Vorarlberg (Austria)	Vorarlberg	District
26~59	Reserved		
60	CA	Canada	
61	US	America	
62	Other 60Hz		
70	JP 50Hz		
71	JP 60Hz		

## 4. Examples

Take ComTest for example.

### 4.1 Acquire one piece of running information

Supposed that the inverter address is 1, it needs to acquire data from address 5000 of 3x address type.

The PC sends (HEX):

01 04 13 87 00 01 85 67

The inverter replies (HEX):

01 04 02 01 32 39 75

Note: The type code of inverter SG60KU-M is 0x0132.

### 4.2 Acquire multiple running information

Supposed that the inverter address is 1, it needs to acquire 10 data from address starting from 5000 of 3x address type

The PC sends (HEX):

01 04 13 87 00 0A C4 A0

The inverter replies (HEX):

01 04 14 01 32 00 28 00 00 00 00 00 05 00 00 00 26 00 00 00 00 00 00 00 56 EA

Note: The type code of inverter SG60KU-M is 0x0132. The nominal output power is 4.0kW, two-phase. Daily power generation is 0. The total power generation is 5kWh. The total running time is 38h. The internal temperature is 0°C. The internal transformer temperature is 0°C.

#### 4.3 Acquire SN

Supposed that the inverter address is 1, it needs to acquire 10 data from address starting from 4990 of 3x address type

The PC sends (HEX):

01 04 13 7D 00 0A E4 91

The inverter replies (HEX):

01 04 14 31 32 31 32 31 32 30 30 31 00 00 00 00 00 00 00 00 00 00 00 00 00 00 9B 56

Note:

1. SN data type is UTF-8;
2. Serial number is: 121212001

#### 4.4 Read one setting datum

Supposed that the inverter address is 1, it needs to read data from address 5000 of 4x address type.

The PC sends (HEX):

01 03 13 87 00 01 30 A7

The inverter replies (HEX):

01 03 02 07 D8 BA 2E

Note: the data read out is year 2008.

#### 4.5 Read multiple setting data

Supposed that the inverter address is 1, it needs to read 10 data from address starting from 5000 of 4x address type.

The PC sends (HEX):

01 03 13 87 00 0A 71 60

The inverter replies (HEX):

01 03 14 07 DA 00 0A 00 1E 00 09 00 28 00 25 00 CE 00 AA 01 F4 00 00 80 53

Note: The data are October, 10, 2010, 09:40:37; Stop; power limitation on, power limitation value is 50 %.

#### 4.6 Set one datum

Supposed that the inverter address is 1, it needs to set data from address 5000 of 4x address type.

The PC sends (HEX):

01 10 13 87 00 01 02 07 DA 19 4D

The inverter replies (HEX):

01 10 13 87 00 01 B5 64

Or

The PC sends (HEX):

01 06 13 87 07 DA BE CC

The inverter replies (HEX):

01 06 13 87 07 DA BE CC

Note: The setting data is year 2010

#### 4.7 Set multiple data

Supposed that the inverter address is 1, it needs to set 10 data to address starting from 5000 of 4x address type.

The PC sends (HEX):

01 10 13 87 00 0A 14 07 D9 00 0A 00 1E 00 09 00 10 00 00 00 CE 00 AA 01 F4 00 00 3E 65

The inverter replies (HEX):

01 10 13 87 00 0A F4 A3

Note: The data are October, 30, 2009, 09:16:00, stop, power limitation on, power limitation value is 50 %.

#### 4.8

Read device running information

Supposed that the inverter address is 1, it needs to set 8 data to address starting from 5038 of 3x address type.

The PC sends (HEX):

01 04 13 AD 00 0864 A9

The inverter replies (HEX):

01 04 10 55 00 07 DF 00 0C 00 15 00 04 00 0C 00 3B 00 0A EE D1

Note:

1) Device running state is Fault run (0x5500); the fault/alarm time and code are valid in this state;

2) Fault time: 4 (0x0004):12(0x000C): 59(0x003B), Dec. (0x000C), 21(0x0015), 2015(0x07DF); the fault is island (0x000A).
