Welcome to Debian GNU/Linux 10 (buster)!

[  OK  ] Listening on fsck to fsckd communication Socket.
[  OK  ] Listening on udev Kernel Socket.
[  OK  ] Listening on Journal Socket.
         Starting Remount Root and Kernel File Systems...
         Starting Create list of required static device nodes for the current kernel...
[  OK  ] Started Dispatch Password Requests to Console Directory Watch when bootsplash is active.
[  OK  ] Started Forward Password Requests to Wall Directory Watch.
[  OK  ] Reached target Paths.
[  OK  ] Reached target Swap.
[  OK  ] Created slice system-systemd\x2dfsck.slice.
[  OK  ] Reached target Local Encrypted Volumes.
[  OK  ] Reached target System Time Synchronized.
[  OK  ] Listening on Journal Socket (/dev/log).
         Starting Load Kernel Modules...
[  OK  ] Listening on Syslog Socket.
         Mounting RPC Pipe File System...
[  OK  ] Created slice system-getty.slice.
         Starting Restore / save the current clock...
```

```
              Mounting RPC Pipe File System...
[  OK  ] Created slice system-getty.slice.
              Starting Restore / save the current clock...
              Mounting Kernel Debug File System...
[  OK  ] Listening on initctl Compatibility Named Pipe.
[  OK  ] Listening on RPCbind Server Activation Socket.
[  OK  ] Listening on udev Control Socket.
              Mounting POSIX Message Queue File System...
              Starting Nameserver information manager...
[  OK  ] Set up automount Arbitrary Executable File Formats File System Automount Point.
[  OK  ] Created slice User and Session Slice.
[  OK  ] Reached target Slices.
[  OK  ] Created slice system-serial\x2dgetty.slice.
              Starting udev Coldplug all Devices...
[  OK  ] Listening on Journal Audit Socket.
[FAILED] Failed to start Remount Root and Kernel File Systems.
See 'systemctl status systemd-remount-fs.service' for details.
[FAILED] Failed to start Create list of required static device nodes for the current kernel.
See 'systemctl status kmod-static-nodes.service' for details.
[  OK  ] Started Load Kernel Modules.
[FAILED] Failed to mount RPC Pipe File System.
See 'systemctl status run-rpc_pipefs.mount' for details.
```

[FAILED] Failed to mount RPC Pipe File System.
See 'systemctl status run-rpc_pipefs.mount' for details.
[DEPEND] Dependency failed for RPC security service for NFS client and server.
[DEPEND] Dependency failed for RPC security service for NFS server.
[FAILED] Failed to start Restore / save the current clock.
See 'systemctl status fake-hwclock.service' for details.
[FAILED] Failed to mount Kernel Debug File System.
See 'systemctl status sys-kernel-debug.mount' for details.
[FAILED] Failed to mount POSIX Message Queue File System.
See 'systemctl status dev-mqueue.mount' for details.
[FAILED] Failed to start Nameserver information manager.
See 'systemctl status resolvconf.service' for details.
[FAILED] Failed to start udev Coldplug all Devices.
See 'systemctl status systemd-udev-trigger.service' for details.
         Starting Helper to synchronize boot up for ifupdown...
[OK] Reached target NFS client services.
         Starting Apply Kernel Variables...
         Mounting Kernel Configuration File System...
         Mounting FUSE Control File System...
         Starting Load/Save Random Seed...
         Starting Create Static Device Nodes in /dev...
[FAILED] Failed to start Helper to synchronize boot up for ifupdown.
See 'systemctl status ifupdown-pre.service' for details.
[DEPEND] Dependency failed for Raise network interfaces.
[FAILED] Failed to mount Kernel Configuration File System.
See 'systemctl status sys-kernel-config.mount' for details.
[OK] Started Apply Kernel Variables.
[FAILED] Failed to mount FUSE Control File System.
See 'systemctl status sys-fs-fuse-connections.mount' for details.
[OK] Started Load/Save Random Seed.

```
[FAILED] Failed to mount Kernel Configuration File System.
See 'systemctl status sys-kernel-config.mount' for details.
[  OK  ] Started Apply Kernel Variables.
[FAILED] Failed to mount FUSE Control File System.
See 'systemctl status sys-fs-fuse-connections.mount' for details.
[  OK  ] Started Load/Save Random Seed.
[FAILED] Failed to start Create Static Device Nodes in /dev.
See 'systemctl status systemd-tmpfiles-setup-dev.service' for details.
[  OK  ] Reached target Local File Systems (Pre).
         Mounting /tmp...
         Starting udev Kernel Device Manager...
[FAILED] Failed to mount /tmp.
See 'systemctl status tmp.mount' for details.
[DEPEND] Dependency failed for Local File Systems.
[DEPEND] Dependency failed for Mark the need to relabel after reboot.
[DEPEND] Dependency failed for Entropy daemon using the HAVEGE algorithm.
         Starting Preprocess NFS configuration...
         Starting Armbian ZRAM config...
[  OK  ] Closed Syslog Socket.
         Starting Hide bootsplash after starting the system...
[  OK  ] Reached target Login Prompts.
[  OK  ] Reached target Timers.
```

```
[  OK  ] Closed Syslog Socket.
[  OK  ] Reached target Login Prompts.
[  OK  ] Reached target Timers.
[  OK  ] Reached target Sockets.
         Starting Armbian hardware monitoring...
         Starting Armbian hardware optimization...
[  OK  ] Started Emergency Shell.
[  OK  ] Reached target Emergency Mode.
[  OK  ] Reached target Network.
[  OK  ] Reached target Network is Online.
[  OK  ] Started udev Kernel Device Manager.
[FAILED] Failed to start Armbian ZRAM config.
See 'systemctl status armbian-zram-config.service' for details.
[FAILED] Failed to start Preprocess NFS configuration.
See 'systemctl status nfs-config.service' for details.
[FAILED] Failed to start Hide bootsplash after starting the system.
See 'systemctl status bootsplash-hide-when-booted.service' for details.
[FAILED] Failed to start Armbian hardware monitoring.
See 'systemctl status armbian-hardware-monitor.service' for details.
[FAILED] Failed to start Armbian hardware optimization.
See 'systemctl status armbian-hardware-optimize.service' for details.
         Starting Armbian memory supported logging...
[FAILED] Failed to start Armbian memory supported logging.
See 'systemctl status armbian-ramlog.service' for details.
         Starting Journal Service...
[  OK  ] Started Journal Service.
         Starting Flush Journal to Persistent Storage...
[FAILED] Failed to start Flush Journal to Persistent Storage.
See 'systemctl status systemd-journal-flush.service' for details.
         Starting Create Volatile Files and Directories...
[FAILED] Failed to start Create Volatile Files and Directories.
See 'systemctl status systemd-tmpfiles-setup.service' for details.
         Starting RPC bind portmap service...
         Starting Update UTMP about System Boot/Shutdown...
[  OK  ] Started RPC bind portmap service.
[  OK  ] Reached target RPC Port Mapper.
[  OK  ] Reached target Remote File Systems (Pre).
[  OK  ] Reached target Remote File Systems.
[  OK  ] Started Update UTMP about System Boot/Shutdown.
         Starting Update UTMP about System Runlevel Changes...
[  OK  ] Started Update UTMP about System Runlevel Changes.
You are in emergency mode. After logging in, type "journalctl -xb" to view
system logs, "systemctl reboot" to reboot, "systemctl default" or "exit"
to boot into default mode.
Give root password for maintenance
